Stock Maintenance system

1) Introduction

1.1 Purpose

This document describes the requirements of a Stock Maintenance system. It explains the main features and functions required to manage stock effeciently.

1.2 Scope.

The system manages stock items, purchases, sales, supplies, and inventory records. It also helps in monitoring stock levels and generating reports.

1.3 Overview

The stock maintenance system to keep track of goods available in a store or organisation. It records incoming and outgoing items and helps user maintain accurate inventory information.

2) General description

The system is mainly used by store staff, managers and administrators. It provides features such as:

- Stock and item management
- Purchase and sales tracking
- Supplier management
- Low stock notifications
- Inventory reports

3) Functional Requirements

3.1 Item Management

1) • the system should allow users to add, update and remove item details
2) It should store information such as item price, name, category and quantity.
3) Users should be able to search for items easily

3.2 Stock Management

• The system should record newly received stock
• It should reduce the quantity when items are sold and issued.
• the current stock level should be updated automatically.

3.3 Supplier management

• Store supplier details such as name, contact & address.
• Maintain records of items purchased from each supplier.

3.4 Stock Alerts

1) the system should identify items with low stock
2) It should notify staff when an item reaches its minimum quantity.
3) out of stock items should be clearly displayed

3.5 Purchase and Sales management

1) Record purchase and sales transactions
2) Update inventory after every transaction
3) Maintain transaction history for future ref

3.6 Reports

- Generate stock and transaction reports.
- Show available, low stock and out-of-stock items
- Allow administrators to view inventory summaries.

4) Non functional Requirements

4.1 Performance

The system should update stock information quickly and respond to user requests without much delay.

4.2 Security

Only authorised users should be allowed to modify stock and transaction records.

4.3 Reliability

The system should maintain accurate stock quantities and prevent loss of important records.

4.4 Scalability

The system should support an increasing number of products, users and transaction.

4.5 Usability.

The system should have a simple interface so that staff can easily manage stock.

5. Design constraint

- The system requires a database to store inventory and transaction records
- Stock changes should be made only by authorised users

→ A reliable network connection may be required for online access.
→ Regular backups should be maintained to prevent data loss.

6) Hardware and software requirement

Hardware : computer / server, barcode scanner, printer and network connection

Software: Operating system, database management system, application server and web browser.

7) Preliminary schedule and budget

The project expected to require about 7 weeks for analysis, design and development. The approx budget is ₹ 41,000 including development hardware, testing and maintenance.

Activity	Duration
Requirement Analysis	1 week
System Design	1 week
Development	3 weeks
Testing	1 week
Deployment & Documentation	1 week
Total	7 weeks

Preliminary Budget

Resource	Estimated cost
Development	₹25000
Testing	₹6000
Hardware/Software	₹ 1000
Software/Tools	₹ 2000
maintenance	₹5000
